If you're a man over the age of 50, your chances of developing a condition called benign prostatic hyperplasia dramatically increase. As you enter middle age, your testosterone levels drop while the size of your prostate increases. If urinary difficulties, impaired libido, and erectile dysfunction have you searching for solutions, Nutri Prostate is your answer.

Unlike risky drugs and surgery commonly offered for BPH, Nutri Prostate offers effective, natural relief that not only treats your enlarged prostate but gives you back that feeling of masculine vigor you remember. It is estimated that approximately 50% of maturing men experience the effects of benign prostatic hyperplasia (enlarged prostate). Men struggling with BPH often notice frequent urges to urinate, weakening urine stream, straining when urinating, nocturia, hesitation of flow, dribbling after urination, pelvic discomfort, and erectile dysfunction.

Oftentimes, the first suggestion for men with mild to moderate BPH is drugs or surgery. Drugs like alpha blockers and 5 alpha reductase inhibitors can cause erectile dysfunction and male breast enlargement. A common surgical procedure known as transurethral resection of the prostate has been linked to infection, prolonged catheterization, and even death due to TURP syndrome.

Nutri Prostate offers a safe, natural solution for your BPH symptoms. It uses a synergistic blend of non-GMO herbs, plant sterols, and vitamins that help reduce your symptoms without the risks associated with drugs and surgery. The primary ingredient in Nutri Prostate is saw palmetto. Herbalists have been using this medicinal herb for centuries to treat enlarged prostate, low libido, and erectile dysfunction in men.

A recent scientific study has shown that men who took a saw palmetto supplement experienced a 64% improvement in ability to achieve erection and a 54% improvement in libido.

Nutri Prostate doesn’t just cover up symptoms; it promotes healing from the inside out. Try it today and experience the real difference.
The tell-tale symptoms of benign prostatic hyperplasia are difficult to ignore. At first, you may notice you're having trouble holding your bladder. You may have to pull over or excuse yourself during meetings just to head to the bathroom. When you start going, however, your stream seems hesitant or you have to strain to get things going after a few false starts.

An enlarged prostate can also interfere with your love life. If inflammation is severe, it can affect your ability to achieve and maintain an erection. It can also cause painful ejaculation and lowered ejaculate stream.

Men with BPH often turn to their doctors for conventional treatments and symptom relief. Unfortunately, the drugs and surgery commonly prescribed for enlarged prostate can result in unsettling and sometimes permanent consequences.

Conventional drugs and surgery can relieve the symptoms of BPH but they can also cause some serious side effects. Let’s take a look at some of them in detail:

**Alpha Blockers**
Alpha blockers relax the bladder neck muscles as well as the muscle fibers in the prostate itself. This makes it easier to urinate but increases the risk of bone fracture, gynecomastia (male breast enlargement), reduced blood pressure, and retrograde ejaculation (where semen backs up into the bladder).

**5 Alpha Reductase Inhibitors**
5 alpha reductase inhibitors work by preventing the hormonal changes that cause your prostate to enlarge. Though they work to treat your symptoms, they can lead to side effects such as erectile dysfunction, loss of libido, retrograde ejaculation, and male breast enlargement.

**TURP**
Transurethral resection of the prostate (TURP) is a type of prostate resection surgery that relieves inflammation and increases urine flow. While primarily successful at relieving the inflammation that restricts urination, this procedure comes with serious risks. These risks include infection, bleeding, prolonged catheterization, and TURP syndrome, a condition that occurs due to iatrogenic water intoxication. In serious cases, this condition can lead to infection and even death.

Ignoring the symptoms of BPH can have serious consequences for your health. Urinary tract infections, kidney stones, bladder stones, acute urinary retention, thickened bladder wall, kidney damage, and even kidney failure can result if you leave your BPH untreated.

Conventional drugs and surgery aren’t your only option for treating BPH. Nutri Prostate provides all the herbs, plant sterols, and vitamins you need to ease prostate inflammation naturally without the risk of lasting side effects.

Saw Palmetto
Saw palmetto is a small palm tree indigenous to Florida. It works to ease prostate inflammation by inhibiting dihydrotestosterone from stimulating an overproduction of cells in your prostate gland. This healing herb has been used as an anti-inflammatory, organ toner, libido enhancer, and energy booster for men for hundreds of years.

Free Plant Sterols
Plant sterols are steroid compounds similar to cholesterol and they have a profound antioxidant and anti-inflammatory effect. In addition to treating BPH naturally, plant sterols have been shown to reduce your risk of prostate cancer by up to 24%.

Stinging Nettle
The active phytochemicals in stinging nettle provide a powerful but gentle anti-inflammatory effect while inhibiting the binding of an androgenic steroid hormone to sex hormone binding globulin (SHBG). When this hormone is prevented from affecting the prostate, your uncom-
comfortable BPH symptoms are safely reduced. Stinging nettle also has the added benefit of reducing the rising estrogen levels that often occur in men entering middle age.

**Graminex G63™**
Graminex G63 is a type of flower pollen that has been used effectively for over 50 years to treat inflammation of the prostate. It contains a superior combination of vitamins, minerals, amino acids, fatty acids, polar lipids, neutral lipids, phytosterols, and flavonoids that reduce prostate inflammation naturally while giving your body a nutritional and energetic boost.

**Pygeum**
Pygeum comes from extracts of the Prunus Africana plant and is used to treat BPH by inhibiting the production of prostaglandins in the prostate. In a clinical trial, 89% of men taking 100 milligrams of pygeum per day reported a significant reduction in the symptoms of enlarged prostate. In addition to treating BPH, this herb has been also shown to improve sexual function.

**Lycopene**
Lycopene, a carotenoid found in tomatoes, watermelon, red pepper, apricot, and guava, reduces the symptoms of BPH by inhibiting androgen receptor expression. It has also been shown to decrease your risk for the development of prostate cancer.

**Vitamin D**
Vitamin D deficiency is quite common in Canada due to chronic lack of exposure to sunlight. Without adequate levels of this essential nutrient, inflammation and immune system malfunction may result. Nutri Prostate contains 500 IU's of immune-boosting vitamin D to heal inflammation and regulate both the epithelial and cell growth proliferation associated with prostate disease.

**Zinc**
Zinc deficiency is one of the most common mineral deficiencies among maturing men. While zinc can be found naturally in foods such as oysters, adding a zinc supplement to your diet keeps rising estrogen and prolactin levels in check, thereby treating your BPH symptoms while reducing your risk for the development of more serious disease. Clinical studies have shown that 75% of men who supplemented their diet with zinc noticed a decrease in BPH symptoms.

**Selenium**
This trace mineral has been shown to decrease prostate inflammation and reduce the chances of prostate cancer by 63%.

If you’re a maturing male (or the partner of one) looking for a natural way to treat benign prostatic hyperplasia without dangerous side effects, Nutri Prostate is your solution. Don’t suffer another day with those uncomfortable urges and sexual dysfunction. Take control of your health today with Nutri Prostate!
Every man can appreciate getting a good night’s sleep, but when you’re constantly getting up to visit the bathroom instead, it can’t help but wear you down. Nutri Prostate is an advanced natural supplement to help make sure those “get up and go” tendencies are gone, long gone!

Nutri Prostate features a synergistic blend of non-GMO herbs, plant sterols and vitamins to help relieve the symptoms of BPH and reduce frequent nighttime urination. Plus, in a recent scientific study one of Nutri Prostate’s main ingredients, Saw Palmetto, was shown to help men experience a 54% improvement in libido. Try Nutri Prostate today and help to enjoy life to the fullest.

- Frequent urination?
- Bladder not entirely empty?
- Difficult or delayed urination?
- Sleep interruption?
